Getting Started

Accurate record-keeping is the backbone of basepin production, and the **JIG B.I.R.** is here to help you streamline that entire process. Whether you're an admin or a technician, consider this system your new central hub for all things related to basepin inspection.

The JIG B.I.R. eliminates the stress of manual tracking. By integrating real-time updates we've made sure you always have the right data at the right time. Follow this guide to learn how to navigate the interface and get the most out of the tools we've built for you.

System Requirements

To get the JIG Basepin Inspection Records up and running, you'll just need a few essentials to keep your workflow moving:

- **A Modern Web Browser:** Whether you're on Chrome, Firefox, or Edge, the B.I.R. is built to run smoothly on any updated browser.
- **A Stable Internet Connection:** Since the system updates in real-time, staying connected ensures that you can log your inspections and track them.
- **A Smartphone:** This is the "bridge" between your physical stock and your digital records. Using a phone allows you to instantly pull up forms and log basepin inspection.

User Roles & Access Control

The JIG B.I.R. is designed to keep data management centralized and secure. To maintain the integrity of your records, the system distinguishes between full administrative control and mobile-based tracking.

- **Administrator (Full Access):** As the Administrator, you have full oversight of the entire system and the technician roster. You hold exclusive permissions that allow you to manage the integrity of the data, specifically the ability to export comprehensive logs and remove log entries when necessary.

- **Others (Regular Access):** If you are a technician, keeper, or visitor, this is your home base. You can easily enter inspection data and keep track of logs whenever you need them. Want to make the account your own? You also have the basic tools to update your username and profile picture.

System Restrictions

The system is designed for flexibility, meaning you aren't tied down to a single device. Whether you prefer working on a desktop or need to use a mobile device while on the move, the JIG B.I.R. remains fully functional across both platforms without any restrictions.

Login / Signup Page

As a user, first you will be greeted with the login page

Figure 1.1 Login Page

You can simply write your username and password before logging in. In case you haven't signed up / registered an account yet, you can go ahead and click at the red "Sign Up" text to be redirected

The image shows a mobile app interface for signing up. At the top is the HEPC logo, followed by the text 'Sign Up' and 'Create your account'. Below this are two buttons: 'Chaz Honrada' and 'ADMIN'. There are three input fields: 'Username', 'Password', and 'Confirm Password'. A red 'SIGN UP >>' button is at the bottom. Below the button, it says 'Already have an account? Login'. At the very bottom, it says '© 2026 JIG B.I.R. Developed by Elijah Boon & Chaz Honrada'.

Figure 1.2 Sign Up

After filling up the form clicking the sign up button, you will be automatically logged in and redirected to the B.I.R Input Form. So be sure to remember the username and password you entered.

Input Form

The image shows a web application interface for the 'INPUT FORM'. At the top left is the HEPC logo. At the top right is a user profile icon labeled 'Donald Duck'. Below the header is a red 'Input Form' button and a 'View Logs' link. The main section is titled '1. Terminal Inspection'. It contains several input fields: 'Section:' with a dropdown menu showing 'AUD', 'JIG/ Board Control No.:' with a dropdown menu showing 'AED-12345', 'Technician:' with a text field showing 'Josh Pogi', 'Item Key:', 'Customer:', and 'Date of Verification:' with a date picker showing 'mm/dd/yyyy'. Below these is a 'SELECT QUARTER:' section with four radio buttons: 'Quarter 1', 'Quarter 2', 'Quarter 3', and 'Quarter 4'. There are also fields for 'No.:' and 'Terminal Part No.:'. At the bottom, there is an 'EVIDENCE PHOTOS:' section with two photo upload areas labeled 'Before Verification' and 'After Verification'. Below the photos is a section for 'APPEARANCE CONDITION (CHECK ALL THAT APPLY):'.

Figure 2.1 Input Form

The Input Form is your primary landing page after logging into the system. It is designed for logging basepin inspection details in real-time or after the task is finished. To ensure system accuracy, please make sure every field is filled out thoroughly.

The digital input form is modeled directly after the standard Basepin Inspection Form to keep things familiar. For added security and record integrity, you can now attach "before" and "after" inspection photos to serve as clear evidence for your logs.

The screenshot shows the HEPC digital input form. At the top, there's a header with the HEPC logo and a user profile. The main form area is divided into sections. The 'EVIDENCE PHOTOS' section has two photo upload areas labeled 'Before Verification' and 'After Verification'. Below this is the 'APPEARANCE CONDITION (CHECK ALL THAT APPLY)' section, which lists five items: 'No Deformation / Bending', 'No Corrosion / Discoloration', 'No Cracks / Dents', 'No Foreign Material', and 'Proper Alignment'. Each item has radio buttons for 'OK' and 'NG', and a text field for 'Remarks'. The '2. Summary Findings' section shows 'Total OK: 2' and 'Total NG: 3'. There's a question 'Were there any immediate replacements required?' with 'YES' and 'NO' radio buttons. At the bottom right, there are 'Reset Form' and 'Submit Form' buttons.

Figure 2.2 Input Form

To save you time, the summary section automatically tracks "OK" and "Not Good" terminal counts based on your inputs. If a replacement is necessary and confirmed, a conditional section will automatically open to collect the relevant details. Once finished, you can use the buttons at the bottom to either clear the form or submit your data.

The Logs Section

The screenshot shows the 'VIEW LOGS' section of the HEPC interface. At the top, there's a header with the HEPC logo and a user profile. Below the header, there's a 'VIEW LOGS' button. The main area contains a table with the following columns: 'NO', 'TERMINAL PART NO', 'SECTION', 'CONTROL NUMBER', 'TECHNICIAN NAME', 'DATE OF VERIFICATION', and 'ACTION'. The table has one row of data. Above the table, there are filters for 'mm/dd/yyyy' and 'to mm/dd/yyyy', a search bar labeled 'Search control number...', and an 'EXPORT' button. There are also buttons for 'Input Form' and 'View Logs'.

NO	TERMINAL PART NO	SECTION	CONTROL NUMBER	TECHNICIAN NAME	DATE OF VERIFICATION	ACTION
194	sdg	AUD	dufg	dufg	2026-04-09	edit view delete

Figure 2.3 Logs

The Logs section serves as your historical archive. To help you navigate your records efficiently, we've included a search bar and a date-range filter for more precise queries.

Available Actions:

- **Select & Export:** Choose specific logs or use the bulk selection tool to export reports.
- **Reviewing:** The "View" button provides a full breakdown of the form, including all attached images.

The screenshot displays the HEPC 'VIEW LOGS' interface. On the left, a sidebar shows a table of log entries with columns for ID, Terminal Part No., and Section. The main area shows a detailed view of a specific log entry. The form includes fields for Section (AUG), JIG/ Board Control No. (e1g), Technician (e1g), Item Key (e1g), Customer (e1g), and Date of Verification (04/09/2020). Below these are radio buttons for 'SELECT QUARTER' (Quarter 1, Quarter 2, Quarter 3, Quarter 4). Further down are input fields for 'No.' (tgd) and 'Terminal Part No.' (e1g). The 'EVIDENCE PHOTOS' section contains two images: 'Before Verification Photo' (a landscape with mountains and water) and 'After Verification Photo' (a person in a red shirt). The '2. Summary Findings' section includes 'Total OK' (5), 'Total NG' (0), and a question 'Were there any immediate replacements required?' with 'YES' and 'NO' radio buttons, where 'NO' is selected.

Figure 2.4 Logs View Entry

- **Editing:** Use the "Delete" button to clear out entries that require correction or removal.

Profile Management

Figure 2.5 Logs View Entry

You can access Profile Management directly from the navigation bar by clicking on your profile picture. A dropdown menu will appear with two options: **Logout** and **Manage Account**.

Please note that your access level determines what you see on this page. If you are logged in as an **Administrator**, your profile management interface will feature additional tools and settings compared to a standard user.

Figure 2.6 Admin Account Settings

In the Administrator view, you have full oversight of the user database. This includes the ability to monitor the total number of registered users, remove accounts when necessary, and reset passwords on behalf of your team. Additionally, you retain the standard options to update your own username and profile photo to keep your account information current.

Regular users are provided with standard customization features. From the profile menu, you can easily modify your username or upload a new profile picture to personalize your presence in the system.

Conclusion

The JIG B.I.R. is designed to transition basepin inspection from a manual, time-consuming task into a streamlined digital process. By utilizing the real-time tracking, automated summaries, and visual verification features outlined in this guide, you can ensure the highest level of data integrity and operational efficiency. Whether you are managing the team as an Admin or logging daily inspections as a Technician, this platform provides the tools necessary to keep production moving smoothly and accurately.

We hope this guide helps you feel confident navigating the JIG B.I.R. system. Our goal is to make your daily inspection tasks as simple and organized as possible, giving you more time to focus on quality and less time on paperwork. Remember to utilize the search filters and visual logs to stay on top of your records. If you ever need a refresher, feel free to refer back to this manual to make the most out of your digital workspace.
